---

I'm Ahmad Ammar Musyaffa, an Informatics Engineering student at State University of Malang with a passion for web development. To sharpen my skills and gain hands-on experience, I work as a freelance developer to building custom web-based applications tailored to client needs. I primarily work with React, Next.js, and Tailwind CSS for front-end development, also Laravel and Go for back-end development. I'm always eager to learn, improve, and stay updated with the latest advancements in the tech world. I'm excited to collaborate, connect, and explore new opportunities where I can grow and contribute to impactful projects.

Tech Skills : Javascript, Typescript, Python, Go, NextJs, Tailwind CSS, Laravel, Git, Docker

EDUCATION

Informatics Engineering – State University of Malang
2022- 2026

EXPERIENCE

Fullstack Developer Freelance – CV Solusipro
April 2025 – July 2025

- Collaborate with the development team to develop an information system for the management of zakat, waqf, and infaq at the Ministry of Religious Affairs (Kemenag) of Malang City.
- Actively participate in regular project meetings to align goals, discuss progress, and resolve issues collaboratively.
- Develop the system using CodeIgniter 4 framework and MySQL as the database management system.
- Utilize GitLab for version control and collaborative development, ensuring seamless integration and code management within the team.

Back End Developer Freelance – State University of Malang
April 2025 – June 2025

- Developed backend services for an interactive learning media platform in collaboration with the Faculty of Mathematics and Natural Sciences as part of an academic research initiative.
- Built 21 API endpoints for user authentication, student worksheets, and interactive quizzes features using NextAuth and Next.js API Routes.
- Implemented JWT-based authentication and multi-role access control to ensure secure and role-specific access to platform features.
- Managed database operations using Prisma ORM with PostgreSQL hosted on Supabase as the Backend-as-a-Service (BaaS).
- Participated in regular team meetings to coordinate tasks, gather feedback, and resolve technical challenges collaboratively.

Fullstack Developer Freelance – Independent Freelancer
August 2023 – May 2025

- Accomplished 13 projects for a diverse range of clients using various technology stacks including Laravel, React, Next.js, and Go.
- Regularly conducted meetings with clients to discuss project requirements, provide technical insights, and ensure alignment with their business objectives.

Fullstack Developer Freelance – PT Pastijadi Digital Solutions
August 2024 – November 2024

- Developed a dynamic company profile website for Batik Zulpah using a CMS-based architecture to ensure ease of content management.
- Utilized Laravel and MySQL as the core technology stack for the backend development and efficient data management.
- Maintained and enhanced the applications based on user feedback and evolving runtime requirements.
- Managed deployment processes and successfully deployed the project to production using a shared hosting platform.
- Actively participated in weekly team meetings to review progress, resolve blockers, and align on project goals.

Fullstack Developer Freelance – State University of Malang
June 2024 – November 2024

- Collaborated with Directory of Innovation team to develop an Islamic educational platform, through a collaborative project between State University of Malang and LP Ma'arif PWNU East Java.
- Utilized Laravel and MySQL for building a secure, scalable, and feature-rich application.
- Maintained and improved the application by incorporating user feedback and addressing runtime requirements.
- Ensured development stayed on track by following a defined project timeline and participating in regular team meetings to coordinate tasks and resolve challenges.
